

**FACULTY OF ENGINEERING**  
**Scheme of Instruction & Examination**  
and  
**Syllabi**  
**B.E. III-Semester & IV-Semester**  
of  
**Four Year Degree Programme**  
In  
**Civil Engineering**

(With effect from the academic year 2017 – 2018)  
(As approved in the faculty meeting held on 26 July 2017)

Issued by  
**Dean, Faculty of Engineering**  
**Osmania University, Hyderabad**  
**July 2017**

**SCHEME OF INSTRUCTION & EXAMINATION**  
**B.E. III – Semester**  
**(CIVIL ENGINEERING)**

BS: Basic Sciences                      ES: Engineering Sciences    MC: Mandatory Course

PC: Professional Course    HS: Humanities and Sciences

L: Lectures      T: Tutorials      Pr : Practicals      Drg: Drawing

**CIE:** Continuous Internal Evaluation                      **SEE:** Semester End Examination (Univ. Exam)

**Note:** 1) Each contact hour is a Clock Hour

2) The practical class can be of two and half hour (clock hours) duration as per the requirement of a particular laboratory.

3) Students admitted into B.E./B.Tech. courses under lateral entry scheme (through ECET) from the academic year 2017-18 should undergo the following bridge course subjects at III Semester (CBCS).

(1) ES 154 CS    Computer Programming Lab                      (2) MC 156 EG    Engineering English Lab

Course Code	Course Title					Core / Elective	
BS 301 MT	<b>Engineering Mathematics – III</b> (Common to all branches)						
Prerequisite	Contact Hours per Week				CIE	SEE	Core
	L	T	D	P			Credits
NIL	3	1	-	-	<b>30</b>	<b>70</b>	3
<b>Course Objectives</b> <ul style="list-style-type: none"> <li>➤ To introduce the concept of functions of complex variables and their properties</li> <li>➤ To formulate partial differential equations and to introduce a few methods to solve first order linear and non-linear partial differential equations</li> <li>➤ To study Fourier series and its applications to partial differential equations</li> </ul> <b>Course Outcomes</b> <ul style="list-style-type: none"> <li>➤ determine the analyticity of a complex functions and expand functions as Taylor and Laurent series</li> <li>➤ evaluate complex and real integrals using residue theorem</li> <li>➤ expand function as a Fourier series</li> <li>➤ find solutions of first order and second order partial differential equations</li> </ul>							

**UNIT-I**

**Functions of Complex Variables:** Limits and continuity of function, differentiability and analyticity, necessary & sufficient conditions for a function to be analytic, Cauchy-Reimann equations in polar form, harmonic functions, complex integration, Cauchy's integral theorem, extension of Cauchy's integral theorem for multiply connected regions, Cauchy's integral formula, Cauchy's formula for derivatives and their applications.

**UNIT - II**

**Residue Calculus:** Power series, Taylor's series, Laurent's series, zeros and singularities, residues, residue theorem, evaluation of real integrals using residue theorem, bilinear transformation, conformal mapping.

**UNIT - III**

**Fourier Series:** Fourier series, Fourier series expansions of even and odd functions, convergence of Fourier series, Fourier half range series.

**UNIT - IV**

**Partial Differential Equations:** Formation of first and second order partial differential equations, solution of first order equations, Lagrange's equation, Nonlinear first order equations, Charpit's method, higher order linear equations with constant coefficients.

**UNIT - V**

**Fourier Series Applications to Partial Differential Equations:** Classification of linear second order partial differential equations, separation of variables method (Fourier method), Fourier series solution of one dimensional heat and wave equations, Laplace's equation.

- 5) James Brown, Ruel Churchill, *Complex variables and Applications*, 9<sup>th</sup> Edition, 2013.

Course Code	Course Title					Core / Elective	
ES321EE/ME	<b>Electrical and Mechanical Technology Section A: Electrical Technology</b>						
Prerequisite	Contact Hours per Week				CIE	SEE	Core
	L	T	D	P			Credits
NIL	3	-	-	-	12	38	3
<b>Course Objectives</b> <ul style="list-style-type: none"> <li>➤ Acquire knowledge in electrical circuits.</li> <li>➤ Be able to understand the basic principle operation of electrical machines.</li> </ul> <b>Course Outcomes</b> <ul style="list-style-type: none"> <li>➤ Students will know the basics of Electrical Engineering with good knowledge on underlying principles of operation</li> <li>➤ Students can relate these basics with daily experiences</li> </ul>							

**UNIT- I**

**DC Circuits:** Ohm's law, Kirchhoffs laws, Resistance networks, Series, Parallel. and Series-parallel circuits, Power loss in resistive elements.

**AC Circuits:** Principles of production of ac waveform, frequency, effective value and form factor, Phasor representation, Behaviour of pure resistance, inductance, and capacitance with ac sinusoidal source, Impedance and simple ac networks with R, Land C elements.

**UNIT-II**

**Three Phase Circuits:** Star and Delta connections under balanced conditions, Line & phase Voltages and currents and three phase power. Working principle of single phase energy meter. Basic principles of DC generator and motor

**UNIT- III**

**Transformers:** Principle and working under no-load and load conditions, O.C & S.C tests, Losses & efficiency.

**Three phase Induction Motors:** Rotating magnetic field, Torque-slip characteristics, Starting methods - DOL starter, Star/Delta starter.

Basic idea and applications of single phase induction motors - Capacitor start I-phase induction motor.

**Suggested Readings:**

- 1) Mehta YK., *Principles of Electrical Engineering and Electronics*, S.Chand & Co., 1999
- 2) Naidu M.S. & Kamakshiah S., *Introduction to Electrical Engineering*, Tata McGraw Hill, 1995
- 3) A.Chakrabarti, Sudipta Nath, Chandan Kumar Chanda, *"Basic Electrical Engineering"* Tata McGraw Hill Education PVT LTD, 2009.

Course Code	Course Title					Core / Elective	
ES321EE/ME	<b>Electrical and Mechanical Technology Section B: Mechanical Technology</b>						
Prerequisite	Contact Hours per Week				CIE	SEE	Core
	L	T	D	P			Credits
NIL	3	-	-	-	13	37	3
<b>Course Objectives</b>							
<ul style="list-style-type: none"> <li>➤ To know the working principle of earth moving equipment</li> <li>➤ To study types and working principle of conveying and hoisting equipment</li> <li>➤ To understand the working principle of concrete producing, concrete screening and concrete mixing equipment</li> <li>➤ To know the principle of pneumatic equipment and tools</li> </ul>							
<b>Course Outcomes</b>							
<ul style="list-style-type: none"> <li>➤ Will have an in depth knowledge on Earth moving and excavating equipments.</li> <li>➤ Will have knowledge of various conveyor systems and will be able to design conveyor system with optimum system with the given constraints.</li> <li>➤ Will have in depth knowledge about functioning of various components of concrete and aggregate making equipment and as well have exposure to various pneumatic tools.</li> </ul>							

**UNIT-I**

General Description, Operation and Selection of the following: Earth moving and Excavation Equipment -Shovels, Dragline, Clam shell, Cable Excavator, Bucket Wheel Excavator, Tractor, Bull -dozer, Scraper, Earth compactors.

**UNIT-II**

Conveying Equipment: Belt Conveyor, Screw Conveyor, Bucket Conveyor, Aerial ropeway, Hoisting Equipment: Hoist Winch, Differential and Worm geared chain hoists. Fork lift truck, Guyed derricks, Swing and non-swing mobile crane, Whirler crane, Tower crane.

**UNIT -III**

Aggregate and Concrete Producing Equipment: Crushers, Jaw, Gyratory, Hammer and Roll crushers; Screens: Stationary, Revolving, Shaking and Vibrating screens. Concrete mixers, Concrete pump. Pneumatic Equipment: Reciprocating air-compressor, Construction of pneumatic tools: Jack hammer, Paving breaker, Concrete vibrator.

Prerequisite	Contact Hours per Week				CIE	SEE	Credits
	L	T	D	P			
NIL	3	-	-	-	<b>30</b>	<b>70</b>	3
<b>Course Objectives</b> <ul style="list-style-type: none"> <li>➤ Understanding the engineering characteristics of different types of rocks for their suitability to Civil Engineering applications</li> <li>➤ Assessing the geological features like faults, folds, joints etc.</li> <li>➤ Concepts of weathering and its Engineering classification, process of formation of soil and their Engineering properties.</li> <li>➤ Conceptualization of the site investigation methods to know the ground condition for dam sites, tunnels and other structures.</li> </ul> <b>Course Outcomes</b> <ul style="list-style-type: none"> <li>➤ Differentiates between a rock and a mineral</li> <li>➤ Knowledge of the earth's interior and exterior processes</li> <li>➤ Application of principles of geology to Civil Engineering problems</li> </ul>							

### UNIT-I

**Rocks:** Distinguishing features of igneous, sedimentary and metamorphic rocks Geological description and Indian occurrence of Granite, Basalt, Dolerite, Gabbro, Laterite, Sandstone Shale, Limestone Slate, Gneiss, Quartzite, Marble, Khondalite and chamockite.

**Geological Structures:** Folds, Fractures joints and faults - Fundamental types, mechanism origin and classifications of structures; Field identification and Engineering analysis of structures

### UNIT-II

**Rock Weathering:** Processes and end - products of weathering; susceptibility of rocks to weathering, Assessment of the degree of weathering and its classification.

**Geology of Soils:** Formation, geological classification, description and Engineering use of soils. Types of Indian soils.

**Hydrogeology:** Hydrologic cycle, water table, aquifers, occurrence of ground water in various lithological formations, ground water movement, springs, ground water exploration and ground water provinces of India.

### UNIT -III

**Geomorphology:** Evolution, characteristics features and Engineering, considerations of fluvial, Aeolian, glacial and marine land forms.

**Rock Mechanics:** Engineering properties- of rocks Stress - Strain behaviour of rocks under uniaxial compression.

**Site Investigation:** Aerial Photographs, Electrical: Resistivity and Seismic refraction methods.

#### **UNIT-IV**

**Rock as a Construction Material:** Geological considerations III the selection of Concrete aggregate, Highway and Runway aggregates, building stones, Decorative stones, Roofing and facing stones. Building stones of India.

**Geology of Dams and Reservoirs:** Types of Dams, Problems associated with Dam foundations and reservoirs, Engineering Geological investigations for a masonry dam site, Analysis of dam failure; Engineering Geology of major Dam sites of India.

#### **UNIT-V**

**Tunnels:** Stand - up time of different rocks, Engineering Geological investigations of tunnels in rock, problems in tunneling, pay line and over break, logging of tunnels and geology of some well known Indian tunnels.

**Geological Hazards:** Geological aspects of Earthquakes, Tsunamis and Landslides; Disaster prevention, mitigation and management.

#### **Suggested Readings:**

- 2) Dimitri P. Krynine and William R. Judd, *Principles of Engineering Geology & Geotechnics*, CBS Publishers & Distributors, First Edition, 1998.
- 3) BP. Attewell and I.W. Fanner, *Principles of Engineering Geology*, Chapman and Hall 1976.
- 4) Officers of the Geological Survey of India, "*Engineering Geology Case Histories*" Miscellaneous Pub. No. 29, 1975.

Course Code	Course Title					Core / Elective	
PC302CE	<b>Strength of Materials - I</b>					Core	
Prerequisite	Contact Hours per Week				CIE	SEE	Credits
	L	T	D	P			
NIL	3	1	-	-	<b>30</b>	<b>70</b>	3
<b>Course Objectives</b>							
<ul style="list-style-type: none"> <li>➤ Understand the basic concept of the stress and strain for different materials.</li> <li>➤ Know the mechanism of development of shear force and bending moments in beams.</li> <li>➤ Understand and analyze the stresses for the combined action of direct load and Bending Moment</li> <li>➤ Students will be able to define Principal Stresses and strains and different theories of failure.</li> <li>➤ Know the concept of unsymmetrical bending and shear centre for different members.</li> </ul>							
<b>Course Outcomes</b>							
<ul style="list-style-type: none"> <li>➤ Apply the fundamental concepts of stress and strain in the design of various structural components.</li> <li>➤ Analyze determinate beams to determine shear forces, bending moments and design forces in trusses.</li> <li>➤ Determine the bending stresses and shear stresses produced in a beam subjected to system of loads</li> <li>➤ Student will be able to define principal stresses and strains and understand why material fractures on planes other than the plane over which the tensile force is applied.</li> <li>➤ Solve problems involving unsymmetrical bending in structural members.</li> </ul>							

**UNIT-I**

**Simple Stresses and Strains:** Definitions of stresses and strains-Hooke's Law - Modulus of Elasticity- Stress - Strain curve for ductile materials- working stress and factor of safety- Deformation of bars under axial loads- uniform sections and abruptly varying sections- deformation due to self weight- Bars of uniform strength- Poission's ratio- volumetric strain and restricted strains- relationships between elastic constants. Compound bars and temperature stresses: Statically indeterminate problems in tension and compression. Temperature stresses.

**UNIT -II**

**Shear Force and Bending Moment:** Definitions- Different types of beams and loads- shear force and bending moment diagrams for cantilever, and simply supported beams with and without over hangs subjected to different kinds of loads viz., point loads, uniformly distributed loads, uniformly varying loads and couples- Relation between loading, shear force and bending moments. Shear force and bending moment diagrams by graphical methods.

**Bending Stresses in Beams:** Assumptions in theory of simple bending- Derivation of bending equation, Moment of resistance- calculation of stresses in statically determinate beams for different loads and different types of structural sections- flitched beams.

### UNIT -III

**Shear stress in Beams:** Equation of shear stresses, distribution across rectangular, circular, triangular, T and diamond section.

**Direct and Bending Stresses:** Basic concept, Eccentric loading, limit of eccentricity- Core of sections- rectangular and circular, solid and hollow sections- Wind pressure on chimneys and water pressure on dams.

### UNIT-IV

**Compound Stresses:** Stresses on oblique planes, principal stresses and planes. Ellipse of stress and Mohr's circle of stress.

**Thin Cylinders:** Thin cylinders subjected to internal fluid pressure, volumetric change.

**Thick Cylinders:** Lamé's equations, stresses under internal and external fluid pressures- Compound cylinders- Shrink fit pressure.

### UNIT-V

**Unsymmetrical bending of beams:** Location of neutral axis, maximum stresses for rectangular section, Symmetric channel section.

**Shear Centre:** Shear stress, shear flow, locating shear center for angle section channel section and T- section, with one axis of symmetry.

<b>Course Objectives:</b> <ul style="list-style-type: none"> <li>➤ Concepts of various fluid properties</li> <li>➤ Understand the basic concepts of fluid motion</li> <li>➤ Knowledge of forces due to fluids and energy principles</li> <li>➤ Study of flow measurement devices</li> <li>➤ Study of compressible fluid flows for different conditions of expansion</li> </ul> <b>Course Outcomes</b> <ul style="list-style-type: none"> <li>➤ Application of basic principles in Fluid Mechanics</li> <li>➤ Application of the concepts of Bernoulli's equation to Fluid mechanics problems</li> <li>➤ Knowledge of incompressible flows and its applications</li> </ul>							

**UNIT-I**

**Fluid Properties:** Basic concepts: Specific weight, specific volume, specific mass, gravity, viscosity, bulk modulus, vapour pressure, capillarity and surface tension. Measurement of pressure, Manometers, Bourden Gauge, Micro manometer, pressure on plane and curved surfaces.

**UNIT-II**

**Fluid Kinematics:** stream lines, path lines, streak lines, stream tubes, classification of fluids, steady and unsteady flows, laminar and turbulent flows, uniform and non-unsteady flows, rotational and irrotational flows, laminar and turbulent flows, uniform and non-uniform flow, one, two and three dimensional flows, stream function, and velocity potential, significance and use of flownets.

**UNIT – III**

**Fluid Dynamics:** Convective and local acceleration, concept of continuity, Three-dimensional continuity equation, Body forces and surface forces, Body force potential, Euler's equation of motion for 3-D flow, Bernoulli's equation by integration of Euler's equation, Significance of Bernoulli's equation and its limitations

**UNIT – IV**

**Flow Measurement:** Vortex flow and its types, Momentum principle, application to bends, Measurement of discharge – Venturimeter, Orifice-meter, Nozzle meter, Elbow meter, Rotameter, Orifices and mouth pieces, Notches and weirs, Measurement of velocity – Piezometers

**UNIT-V**

**Compressible Flow:** Compressibility of liquids and gases, Differential form of continuity equation, Bernoulli's energy equation for isothermal and adiabatic conditions, Velocity of pressure wave, wave velocity for adiabatic and isothermal conditions, Mach Number and Mach cone, stagnation pressure and temperature.

**Suggested Readings:**

- 2) Vijay Gupta and Santosh K. Gupta, '*Fluid Mechanics and its applications*', Wiley Eastern Ltd., New Delhi, 1984
- 3) K.L. Kumar, '*Engineering Fluid Mechanics*', Eurasia Publishing House Pvt Ltd., New Delhi, 2009
- 4) Vallentine, H.R., '*Applied Hydrodynamics*', Butterworths & Co Ltd., London, 1959

Course Code	Course Title					Core / Elective	
PC304CE	<b>Building Materials and Construction</b>					Core	
Prerequisite	Contact Hours per Week				CIE		
	L	T	D	P		Credits	
NIL	3	-	-	-	<b>30</b>	<b>70</b>	3

**Course Objectives:**

- Study about the basic building materials, properties and their applications
- Know the smart building materials, external paints and their uses
- Understand different types of masonries and their applications
- Study about standard dimensions of doors, windows ,ventilators and other components of buildings

**Course Outcomes**

- Differentiate between various building materials i.e, both conventional and smart building materials
- Know the importance of energy conservation, damp proof course and fire protection in buildings.
- Understand different materials used and construction of various form works and scaffoldings.

**UNIT - I**

**Stones:** Uses of stones as building materials, classification, characteristics, dressing and polishing of stones, methods of quarrying and construction.

**Bricks:** Methods of manufacturing bricks. Classification and methods of construction.

**Timber:** Timber as a building material and its uses. Methods of seasoning and preservation laminates and their uses. Defects in Timber.

**UNIT - II**

**Cement:** Introduction to cement, different grades, IS specifications and OPC and PPC Cements (blended cements).

**Mortar and Sand:** Characteristics of good mortar making sand, availability of sand and its classification, bulking of sand, manufacturing methods -of mortar. Different types of mortars- preparation, setting and curing.

**Coarse and fine Aggregate:** Characteristics of good coarse and fine aggregates for manufacture of concrete. Significance and application of coarse and fine aggregate for the production of good quality concrete.

**UNIT - III**

**Concrete:** Introduction to Nominal mix and Design mix.

**Smart Building Materials:** Energy conservation in buildings- use of recycled materials, regional materials and industrial waste products as means of sustainable development. Green Building Materials.

**Plastering and Pointing:** Different types of plasters and plastering process, defects in plastering.

**Paints, Varnish and Distemper:** Constituents, characteristics of good paints, bases, vehicles, thinners and coloring pigments. Painting of different types of surfaces varnish and its types, application. Distemper, dry and oil bound, and application of distemper.

**UNIT - IV**

**Form work-** Types of Form work, types of materials used in form work

**Scaffoldings-** Types of Scaffoldings, Scaffolding Erection & dismantling, Scaffolding Inspection

**Fire protection in structures-** Classification of fire, general causes of fire, detection of fire, methods for fire control, Analysis for structural components for fire resistance ( wood, steel, concrete and masonry).

**Damp Proof Course-**Causes of dampness, effects of dampness, methods of damp proofing

**UNIT - IV**

**Type of joints in concrete-**Construction, expansion, contraction, and isolation joints.

**Cracks in Buildings-** Type of cracks in buildings, principal causes-moisture movement, thermal variations, elastic deformation, creep, chemical reaction.

**Suggested Readings:**

- 1) VN. Vazirani, and S.P. Chandola, *Engineering Materials*, Khanna Publishers 1993.
- 2) Sushil Kumar, *Building Construction*, Standard Publilshers 1992.
- 3) S.P. Arora and S.P. Bindra, *Text book on Building Construction*, Dhanpath Raj Publications, 1999.
- 4) M.S.Shetty, *Concrete Technology*, S.Chand Publishers,2012.

Course Code	Course Title					Core / Elective	
PC305CE	<b>Surveying - I</b>					Core	
Prerequisite	Contact Hours per Week				CIE	SEE	Credits
	L	T	D	P			
NIL	3	-	-	-	<b>30</b>	<b>70</b>	3
<b>Course Objectives:</b> <ul style="list-style-type: none"> <li>➤ Study the basic concepts and principles of chain survey</li> <li>➤ Know the importance of the compass survey and its practical applications</li> <li>➤ Understand the basic methods and applications of plane Table survey</li> <li>➤ Know the field applications and concepts of leveling survey</li> <li>➤ Study the different methods of calculation of area, contouring and measurement of volumes.</li> </ul> <b>Course Outcomes</b> <ul style="list-style-type: none"> <li>➤ Understand the basic principles chain surveying</li> <li>➤ Computation of lengths, areas, bearings and volumes of the given field work</li> <li>➤ Develop and draw plans</li> </ul>							

### UNIT - I

**Chain Survey:** Principles of chain survey- various instruments employed in chain survey- measuring tapes- types of chains- direct and indirect ranging- obstructions in chaining- well conditioned triangle, correction to chain or tape- cross staff survey, errors in linear measurement with incorrect chain length, line ranger and cross staff, use of optical square and clinometers.

### UNIT-II

**Compass Survey:** Use and adjustment of prismatic and surveyor's compass. Methods of surveying with compass, whole circle bearing system quadrantal bearing System. Fore bearing and back bearing, true meridian, magnetic meridian, dip, magnetic declination. Calculation of included from bearings. Calculation of bearings from included angles. Detection of local attraction and its elimination. Errors in prismatic survey, plotting of compass survey, Correction of errors in prismatic survey. Distribution of closing error graphically by Bowditch's method.

### UNIT-III

**Plane Table Survey:** Instruments employed in plane table survey. Use and adjustment of these instruments including simple alidade. Setting up of the table, Various methods of plane table survey: Radiation method of plane tabling, Intersection or triangulation method of plane tabling, Traversing method of plane tabling, Resection method of plane tabling. Three point and two point problems. Plane table contouring using tangent clinometers, errors in plane table survey. Advantages and disadvantages of plane tabling.

#### **UNIT-IV**

**Levelling:** Definitions and principles of construction of a levelling instrument and its various parts with special reference to the spirit bubble and telescope. Use of Dumpy, Tilting and Auto levels, types of leveling staves, methods of booking and reduction of levels. Type of Benchmarks, Establishment of benchmarks by longitudinal leveling and cross-sectional leveling, fly leveling and reciprocal leveling. Sensitivity of bubble tube, errors in leveling, curvature and refraction correction.

#### **UNIT-V**

**Calculation of Areas:** Simpson's rule and trapezoidal rule, computation of area of cross section of level section and two level sections.

**Contouring:** Definition of contour, contour interval and characteristics of contours. Direct and indirect methods of contouring- uses of contours, Grade contours.

**Measurement of Volumes:** Computation of volumes of earth work and water storage by means of contour lines and sections, Computation of volume from spot levels.

#### **Suggested Readings:**

- 5) S.K. Duggal, *Surveying, Vol. 1 & 2*, Tata McGraw Hill Education, 2000.

Course Code	Course Title					Core / Elective	
PC351CE	<b>Engineering Geology Lab</b>					Core	
Prerequisite	Contact Hours per Week				CIE	SEE	Credits
	L	T	D	P			
NIL	-	-	-	2	25	50	1
<b>Course Objectives</b> <ul style="list-style-type: none"> <li>➤ Identify and describe the physical and engineering characteristics of different types of rocks.</li> <li>➤ Establish the ground conditions with different site investigation methods i.e. aerial photographic study and VES.</li> <li>➤ Study the geological, geotechnical, geomorphological and hydrogeological maps of India.</li> <li>➤ Study the foundation geological maps of the case histories (major dams and tunnels) of the India.</li> </ul> <b>Course Outcomes</b> <ul style="list-style-type: none"> <li>➤ Apply geological literature to establish the geotechnical framework needed to design and execute infrastructure projects.</li> </ul>							

1. Identification and description of physical properties of Minerals
2. Identification and description of geological and geotechnical characteristics of rocks; IS Code: 1123 (1975)
3. Determination of apparent specific gravity, porosity and water absorption of different rocks; IS Code: 1124 (1974)
4. a) Study of structural models (folds, faults and unconformities) and  
b) Measurement of strike and dip of planar features by clinometers compass.
5. Vertical electrical sounding (VES) - a field experiment to determine depth to water table and bedrock.
6. Seismic refraction survey to determine depth to bedrock (demonstration only).
7. a) Determination of unconfined compressive strength of intact rocks.  
b) Study of topographic maps.
8. Stereoscopic examination of aerial photographs pertaining to landforms, vegetation and water bodies.
9. Study of geological maps of Andhra Pradesh and India with reference to occurrence of building stones.
10. Study of (a) Geotechnical Map of India and (b) Geomorphological Map of India.
11. Study of Hydro geological Maps of Andhra Pradesh and India.
12. Study of Foundation Geological Maps and sections pertaining to the major dam sites of India.

**Note:** At least ten experiments should be conducted in the Semester

<p>Course Objectives:</p> <ul style="list-style-type: none"> <li>➤ Understand the basic practical applications of survey instruments such as chain, compass, plane table and level.</li> <li>➤ Know the field measurements and field observations</li> <li>➤ Understand the surveying measurement methods related to chain, compass, plane table and level</li> <li>➤ Study and understand the different methods involved in survey field work</li> </ul> <p>Course Outcomes:</p> <ul style="list-style-type: none"> <li>➤ Learn to use of different tools and equipment related to chain, compass, plane table and leveling surveying</li> <li>➤ Computation of lengths, areas, bearings and volumes of the given field work</li> <li>➤ Develop and draw plans</li> </ul>							

### List of Experiments:

1. Applications of traversing to locate a building and field objects by taking Perpendicular and oblique offsets; and recording in the field book.
2. To determine the area of the given site by cross staff survey
3. Study of prismatic compass and setting out a regular polygon
4. Closed traverse by chain and compass, plotting and adjustment by graphical method
5. Plane tabling: Radiation and intersection methods
6. Plane tabling :Three point problem
7. Plane tabling: methods of plane table surveying Two point Problem
8. Introduction to leveling: Fly leveling using dumpy level
9. Introduction to Tilting level: Reciprocal leveling
10. Introduction to digital Auto level: Longitudinal and cross sectional leveling using digital Auto level with bar-coded staff
11. Indirect contouring using digital Auto level with bar-coded staff and plot contours in computer using a software package
12. To determine the area of a figure using a Digital Planimeter
13. Demonstration of Minor instruments: Abney level and Clinometer

**Note:** At least ten experiments should be conducted in the Semester

Course Code	Course Title					Core / Elective	
ES321CE	<b>Mechanics of Materials (for ME, PE &amp; AE)</b>					Core	
Prerequisite	Contact Hours per Week				CIE	SEE	Credits
	L	T	D	P			
NIL	3	1	-	-	30	70	3
<b>Course Objectives:</b> <ul style="list-style-type: none"> <li>➤ Understand the concept of stress, strain and elastic behaviour of materials</li> <li>➤ Know the concepts of strain energy, principal stress and principal planes</li> <li>➤ Learn the bending moment, shear force and the corresponding stress distribution</li> <li>➤ Study the deflections and its applications</li> <li>➤ Understand the theory of torsion and stresses in springs</li> </ul> <b>Course Outcomes</b> <ul style="list-style-type: none"> <li>➤ Apply the fundamental concepts of stress and strain</li> <li>➤ Determine principal stresses and principal planes of a state of stress</li> <li>➤ Analyze the structural members subjected to tension, compression, bending, torsion and combined stresses</li> <li>➤ Solve the stresses in springs</li> </ul>							

**UNIT - I**

**Simple Stresses and Strains:** Types of stresses and strains, Hook's law, stress-strain curve for ductile materials, moduli of elasticity, Poisson's ratio, linear strain, volumetric strain, relation between elastic constants, bars of varying sections, bar of uniform strength, compound bars and temperature stresses.

**UNIT - II**

**Shear Force and Bending Moment:** Relation between intensity of loading, shear force and bending moment, shear force and bending moment diagrams for cantilever and simply supported beams with and without overhanging for point loads, uniformly distributed loads, uniformly varying loads and couples.

**Compound Stresses:** Stresses on oblique planes, principle stresses and principle planes, Mohr circle of stress and ellipse of stress.

**UNIT - III**

**Theory of Simple Bending:** Assumptions, derivation of basic equation, section modulus, moment of resistance, determination of flexural stresses.

**Direct and Bending Stresses:** Basic concepts, core for rectangular solid and hollow circular and I sections.

**Distribution of Shear Stress:** Equation of shear stress, distribution across rectangular, circular, diamond, T and I sections.

**UNIT - IV**

**Deflections:** Deflections of cantilever and simply supported beams including overhanging beams for point loads and uniformly distributed loads by double integration and Macaulay's method.

**Strain Energy:** Strain energy in bars due to gradually applied loads, sudden loads, impact loads and shock loads.

**UNIT - V**

**Torsion:** Theory of pure torsion, derivation of basic equation, hollow circular shafts, strain energy, transmission of power, combined bending and torsion.

**Springs:** Close and open coiled helical springs subjected to axial loads and axial couples, strain energy in springs, carriage springs.

**Suggested Readings:**

- 1) D.S. PrakashRao, *Strength of Materials - A Practical Approach*, Universities Press, 1999.
- 2) R.K. Rajput, *Strength of Materials*, S. Chand & Co., 2003.
- 3) B.C. Punmia, *Strength of Materials*, Laxmi Publishers, 2000.
- 4) Ferdinand P Beer et.al., *Mechanics of Materials*, Tata McGraw-Hill, 2004.
- 5) G.H. Ryder, *Strength of Materials*, Third Edition in SI units, Macmillan Indian Limited, Delhi, 2002.
- 6) S. Ramamrutham, *Strength of Materials*, DhanpatRai& Sons, 1993.
- 7) S.S. Bhavakatti, *Strength of Materials*, Vikas Publications, 2003.

Course Code	Course Title						Core / Elective
MC916CE	<b>Environmental Sciences (for CSE, EEE, EIE, ME &amp; PE)</b>						Core
Prerequisite	Contact Hours per Week				CIE	SEE	Credits
	L	T	D	P			
NIL	3	-	-	-	30	70	3
<b>Course Objectives</b> <ul style="list-style-type: none"> <li>➤ To study the basic concepts, sources of water, floods and their impact on environment</li> <li>➤ To know the ecosystems and energy resources systems</li> <li>➤ To understand the Biodiversity concepts and their advantages</li> <li>➤ To study the different pollutions and their impact on environment</li> <li>➤ To know the social and environment related issues and their preventive measures</li> </ul> <b>Course Outcomes</b> <ul style="list-style-type: none"> <li>➤ Awareness of effects of hazardous environment.</li> <li>➤ Idea about optimum utilization of natural resources.</li> <li>➤ Be a catalyst in moving towards Green technologies</li> <li>➤ Information about rules and regulations of pollution control</li> </ul>							

**UNIT-I**

**Environmental Studies:** Definition, scope and importance, need for public awareness.

**Natural resources:** Water resources; use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams:benefits and problems. Effects of modern agriculture, fertilizer- pesticide problems, water logging and salinity.

**UNIT-II**

**Ecosystems:** Concept of an ecosystem, structure and function of an ecosystem, producers, consumers and decomposers, energy flow in ecosystem, food chains, ecological pyramids, aquatic ecosystem (ponds, streams, lakes, rivers, oceans, estuaries).

**Energy resources:** Growing energy needs, renewable and non-renewable energy sources. Land Resources, land as a resource, land degradation, soil erosion and desertification.

**UNIT-III**

**Biodiversity:** Genetic species and ecosystem diversity, bio-geographical classification of India. Value of biodiversity, threats to biodiversity, endangered and endemic species of India, conservation of biodiversity.

#### **UNIT-IV**

**Environmental Pollution:** Causes, effects and control measures of air pollution, water pollution, soil pollution, noise pollution, thermal pollution; solid and liquid waste management.

**Environment Protection Act:** Air, water, forest and wild life Acts, enforcement of environmental legislation.

#### **UNIT-V**

**Social Issues and the Environment:** Water conservation, watershed management, and environmental ethics. Climate change, global warming, acid rain, ozone layer depletion.

**Environmental Disaster Management:** Types of disasters, impact of disasters on environment, infrastructure, and development. Basic principles of disaster mitigation, disaster management, and methodology. Disaster management cycle, and disaster management in India.

#### **Suggested Readings:**

- 1) A.K. De "*Environmental Chemistry*", Wiley Eastern Ltd.
- 2) E.P. Odum "*Fundamentals of Ecology*", W.B. Saunders Co., USA.
- 3) M.N. Rao and A.K. Datta "*Waste Water Treatment*", Oxford and IBK Publications. Benny Joseph "*Environmental Studies*", Tata McGraw Hill, 2005.
- 4) V.K. Sharma "*Disaster Management*", National Centre for Disaster Management, IIPE, Delhi, 1999.
- 5) "Green Building Council of India", Teri Document.

Course Code	Course Title					Core / Elective	
ES361CE	<b>Mechanics of Materials Lab (for ME &amp; PE)</b>					Core	
Prerequisite	Contact Hours per Week				CIE	SEE	Credits
	L	T	D	P			
NIL	-	-	-	2	25	50	1
<p><b>Course Objectives</b></p> <ul style="list-style-type: none"> <li>➤ Understand the experiments on various materials to assess their behavior and limitations</li> <li>➤ Learn the brittle and ductile material failure patterns</li> <li>➤ Understand the shear force, bending moment and deflection for different types of beams</li> <li>➤ Know the rigidity modulus by conducting spring and torsion test</li> </ul> <p><b>Course Outcomes</b></p> <ul style="list-style-type: none"> <li>➤ Evaluate Young's modulus, rigidity modulus, hardness number, flexural rigidity and impact strength of given specimens</li> <li>➤ Find the cracking stress and compressive strength of bricks</li> <li>➤ Determine the stiffness of close coiled helical springs</li> <li>➤ Find the deflection of a beam</li> </ul>							

**Cycle - I**

1. Uni-axial tension test on a specimen of ductile material
2. Stress-Strain characteristics of a ductile material
3. Brinell's hardness test
4. Compression test on brick
5. Bending test on simply supported beam of timber

**Cycle - II**

6. Torsion test on a specimen of ductile material
7. Compression test on close coiled helical spring
8. Bending test on simply supported beam of steel
9. Bending test on fixed beam of steel
10. Izod impact test
